84. (Original) The immunogenic composition of claim 109, formulated in a dose of 10³ to 10⁶ PFU.

- 85. (Original) The immunogenic composition of claim 109, formulated for administration to the upper respiratory tract by spray, droplet or aerosol.
- 86. (Original) The immunogenic composition of claim 109, wherein the recombinant RSV elicits an immune response against either human RSV A or RSV B or both human RSV A and RSV B.

87-197. (Cancelled)

(Rejoined-Currently Amended) A method for producing an infectious attenuated recombinant RSV particle from one or more isolated polynucleotide molecules encoding said RSV, comprising:

expressing in a cell or cell-free lysate an expression vector comprising an isolated polynucleotide comprising a recombinant RSV genome or antigenome having one or more shifted RSV gene(s) or genome segment(s) within said recombinant genome or antigenome that is/are positionally shifted to a more promoter-proximal or promoter-distal position relative to a position of said RSV gene(s) or genome segment(s) within a wild type RSV genome or antigenome, and RSV N, P, L and M2ORF1 RNA polymerase elongation factor proteins.

(Rejoined-Currently Amended) The method of claim 198, wherein the recombinant RSV genome or antigenome and the N, P, L and M2ORF1 RNA polymerase elongation factor proteins are expressed by two or more different expression vectors.

90-207. (Cancelled)
